

Rail Mounted Gantry Operator Training

Training Program Outline

Goal

Trainees will be able to perform the main operator activities of discharging and loading, containers at Deltaport terminal, following safety measures, precautions, operating principles and rules that ensure the safe and efficient use of the Rail Mounted Gantry (RMG) crane.

Program Description

This training program covers the basics of RMG operation and consists of instructor-led training and practical examination.

Trainees are first introduced to the job of the RMG operator, the equipment and the safety concerns and responsibilities and then given the opportunity to develop basic operational skills in a safe environment. Further operational ability is developed operating the crane in the actual work environment, culminating with trainees demonstrating an established standard of performance in a variety of functional areas including pre-operation checks, performing operations with spreaders and attachments to load and unload containers to and from railcars.
